XLsoft Announces Reseller Partnership with Iron Software, Provider of PDF & Document SDKs for .NET

XLsoft Corporation (Irvine, California) has announced a reseller partnership with Iron Software, a U.S.-based leading provider of developer libraries for document processing, data extraction, and automation. Through this partnership, XLsoft has begun offering Iron Software products to customers in Japan, APAC, and the U.S. All Iron Software licenses are perpetual, with annual support and upgrade options. XLsoft enables enterprise organizations to procure Iron Software through local invoicing, purchasing, and support channels in their respective regions and countries.

■ **Product Name:**

Iron PDF

■ **Product Category:**

Developer libraries/SDKs

■ **Product Overview:**

Iron Software offers a suite of developer libraries that bring document processing directly into your codebase, letting engineers generate, edit, and extract data from PDFs, Office files, images, and barcodes entirely in code. It enables fast, reliable document automation without requiring Microsoft Office, Interop, or any external service dependencies.

This allows enterprise development teams to gain the following benefits:

- Ship document features in minutes instead of building them from scratch
- No Microsoft Office or Interop required on servers
- Runs almost anywhere - Docker, Linux, cloud, CI/CD, and multiple languages
- One suite and one license for PDF, Excel, Word, OCR, barcodes, and more
- Data stays in your own environment for compliance and air-gapped setups
- Commercial support and solid documentation behind it

As development shifts toward containers and cross-platform deployment, document processing that doesn't rely on Microsoft Office has become increasingly important. Iron Software improves both the developer experience and deployment simplicity by bringing PDF, Office, OCR, and barcode capabilities directly into the application layer.

■ **Licensing:**

Iron Software's products are all perpetual licenses, meaning they are one-time purchases. Unlike other products, Iron Software has no additional fees for product use. Support and upgrades are included for the first year and may be renewed annually thereafter.

■ **Pricing:**

Iron Software licenses are available in Lite, Plus, Professional, Unlimited, and Enterprise tier options, depending on company size, number of users, and services used.

Tier Differences

- **Lite:** Single developer, location, and project.
- **Plus:** 3 developers, locations, and projects.
- **Professional:** 10 developers, locations, and projects.
- **Unlimited:** Unlimited developers, locations, and projects

Premium Support License

Includes premium support for the first year.

- **Lite:** Email support, and live chat
- **Plus:** Email support (48hr SLA), and 24/7 support
- **Professional:** Email support (24hr SLA), live chat, 24/7 support, and screen sharing,
- **Unlimited:** Email support (12hr SLA), live chat, 24/7 support, screen sharing, and slack
